Edit on GitHub

Welcome to the Red Pitaya documentation.

- 1. Quick start
 - 1.1. What do I need before I start?
 - 1.2. Connect to STEMLab
 - 1.3. Prepare SD card
 - 1.4. Upgrading Red Pitaya software
 - 1.5. Red Pitaya Aluminum Case assembly
 - 1.6. Troubleshooting
 - 1.7. FAQ
- 2. Applications and Features
 - 2.1. Applications
 - 2.2. Network Manager - how to connect
 - 2.3. Jupyter Notebook
 - 2.4. Remote control (Matlab, Labview, Scilab or Python)
 - 2.5. Supported features and apps by STEMLab model
- 3. Developers guide
 - 3.1. Hardware
 - 3.2. Software
 - 3.3. Examples

3.2.11.5. SCPI commands

The next subsystems are available:

Oscilloscope: `ACQ:SOURCE[<n>]`

Generator: `:SOURCE[<n>]` `:OUTPUT[<n>]`

The value of `n` selects one of the `N` oscilloscope channels. The indexing starts at `1` and ends at `N`. The available options for `n` are `1` or `2`.

3.2.11.5.1. `:OUTPut[<n>][:STATe]`

3.2.11.5.1.1. Syntax:

`:OUTPut[<n>][:STATe] ON|OFF[0|1] :OUTPut[<n>][:STATe]?`

3.2.11.5.1.2. Description

Enable/disable the generator output where `n` is the index (1,2). Query returns generator output enable status as a number.

3.2.11.5.1.3. Parameters

Name	Type	Range	Default
	bool	ON OFF	OFF

3.2.11.5.2. `:SOURce[<n>]:MODE`

3.2.11.5.2.1. Syntax:

`:SOURce[<n>]:MODE PERiodic|BURSt :SOURce[<n>]:MODE?`

3.2.11.5.2.2. Description

Select either periodic or burst mode for generator. Query returns generator mode in the same format as the parameters.

3.2.11.5.2.3. Parameters
